Promoting a Healthy Delta

Having a healthy community and a healthy workforce is a key factor in the economic competitiveness of the Delta region. The healthcare industry is a vital part of the Delta's economy, not only helping to increase health outcomes for the Delta people, but also providing a large portion of jobs for Delta workers.

Delta communities have great people and a workforce that is becoming more skilled and attractive. However, some of the health challenges Delta residents suffer from are holding communities back from reaching maximum economic opportunity and attracting business investment. Health outcomes in the Delta region are dangerously problematic when compared to national averages. With nearly 35% of adults in the Delta obese and 12.6% of adults suffering from

diabetes, there is a direct need to improve the health of Delta residents and their access to quality health care.

Businesses recognize the importance of a healthy workforce and strong healthcare systems. In support of the Delta region's workforce and communities, the Delta Regional Authority has and will continue to invest in the infrastructure, equipment, and physicians that support a quality healthcare system. Through the States' Economic Development Assistance Program, partnerships with other federal agencies focused on health access, and our health-specific funding programs, DRA investments are helping to build a healthcare system that provides quality care, encourages preventive care, and is accessible to all Delta residents and communities.

*DRA's investments in healthcare help to create jobs, improve health outcomes, and increase productivity for the region's workforce.*

2014 DRA Program Highlights

**Innovative Readiness Training --** In its fifth year of partnership, the DRA and U.S. Department of Defense held four medical missions in 11 communities in Arkansas, Illinois, and Louisiana. The missions, which provide medical, optical, and dental care at no cost to residents, provided more than \$4 million in services. With 2014 missions, the partnership has impacted more than 50,000 Delta residents.

**Delta Doctors --** To address health disparities, decrease the high number of health professional shortage areas, and increase access to quality affordable care, the Delta Doctors program provides J-1 Visa Waivers for physicians trained in the U.S. to work in rural communities in the DRA region. The program has placed 346 physicians since its inception. In 2014 alone, 80 physicians were connected to opportunities in rural hospitals and clinics in the Delta.
